

ThedaCare Shawano Clinic

Shawano, WI

This new outpatient surgery center was constructed with nearly 80,000 square feet of clinical and surgical space. Not only was this project challenging with the intricate space being developed, it was also constructed in only 8 months.

Many of the HVAC and Plumbing items were pre-fabricated to reduce field installation time, increase safety and meet the aggressive scheduling requirements of this project. The new medical center consists of two full surgical suites along with a CT scan, MRI, X-ray, recovery and full pharmaceutical requirements to meet the needs and better serve their patients.

The Design/Build nature of this project truly shows the commitment to partnerships. By having clear understanding of the needs of the patients of the clinic we were able to design the facility to what provides the largest benefits for ThedaCare Shawano Clinic.
