

## Oneida Casino Expansion and Renovation Projects

Green Bay, WI

Tweet/Garot is proud to be a part of the \$28 million dollar expansion and renovation project at the Oneida Mason Street and Main Airport Drive Casinos, located in Green Bay, WI.

Tweet/Garot's Plumbing Department and HVAC Engineering Teams were instrumental in the design/build approach of this renovation

The Main Casino expansion included a three-station food court, sports bar and grille and additional gaming area. The Mason Street project included an expansion for the bar and grille, additional gaming space and office renovations.

### Project Challenges

With smoking permitted through the Main Casino, Tweet/Garot's biggest challenge on this project was creating an HVAC system that would maintain a smoke-free central Atrium. The design challenge with this issue was centered around supply and return grilles maintaining a positive and negative air balance in the associated areas.

### Project Components

Tweet/Garot's engineering staff met the air quality challenge at the Main Casino by designing a full-service solution, including major energy savings with the use of an energy recovery unit, all while allowing the Casino to provide an uninterrupted, enjoyable customer experience for their clientele.
